confidential

# It's a wearable device for employees

# It automatically tracks interactions between co-workers

**If one employee has symptoms or infected...**

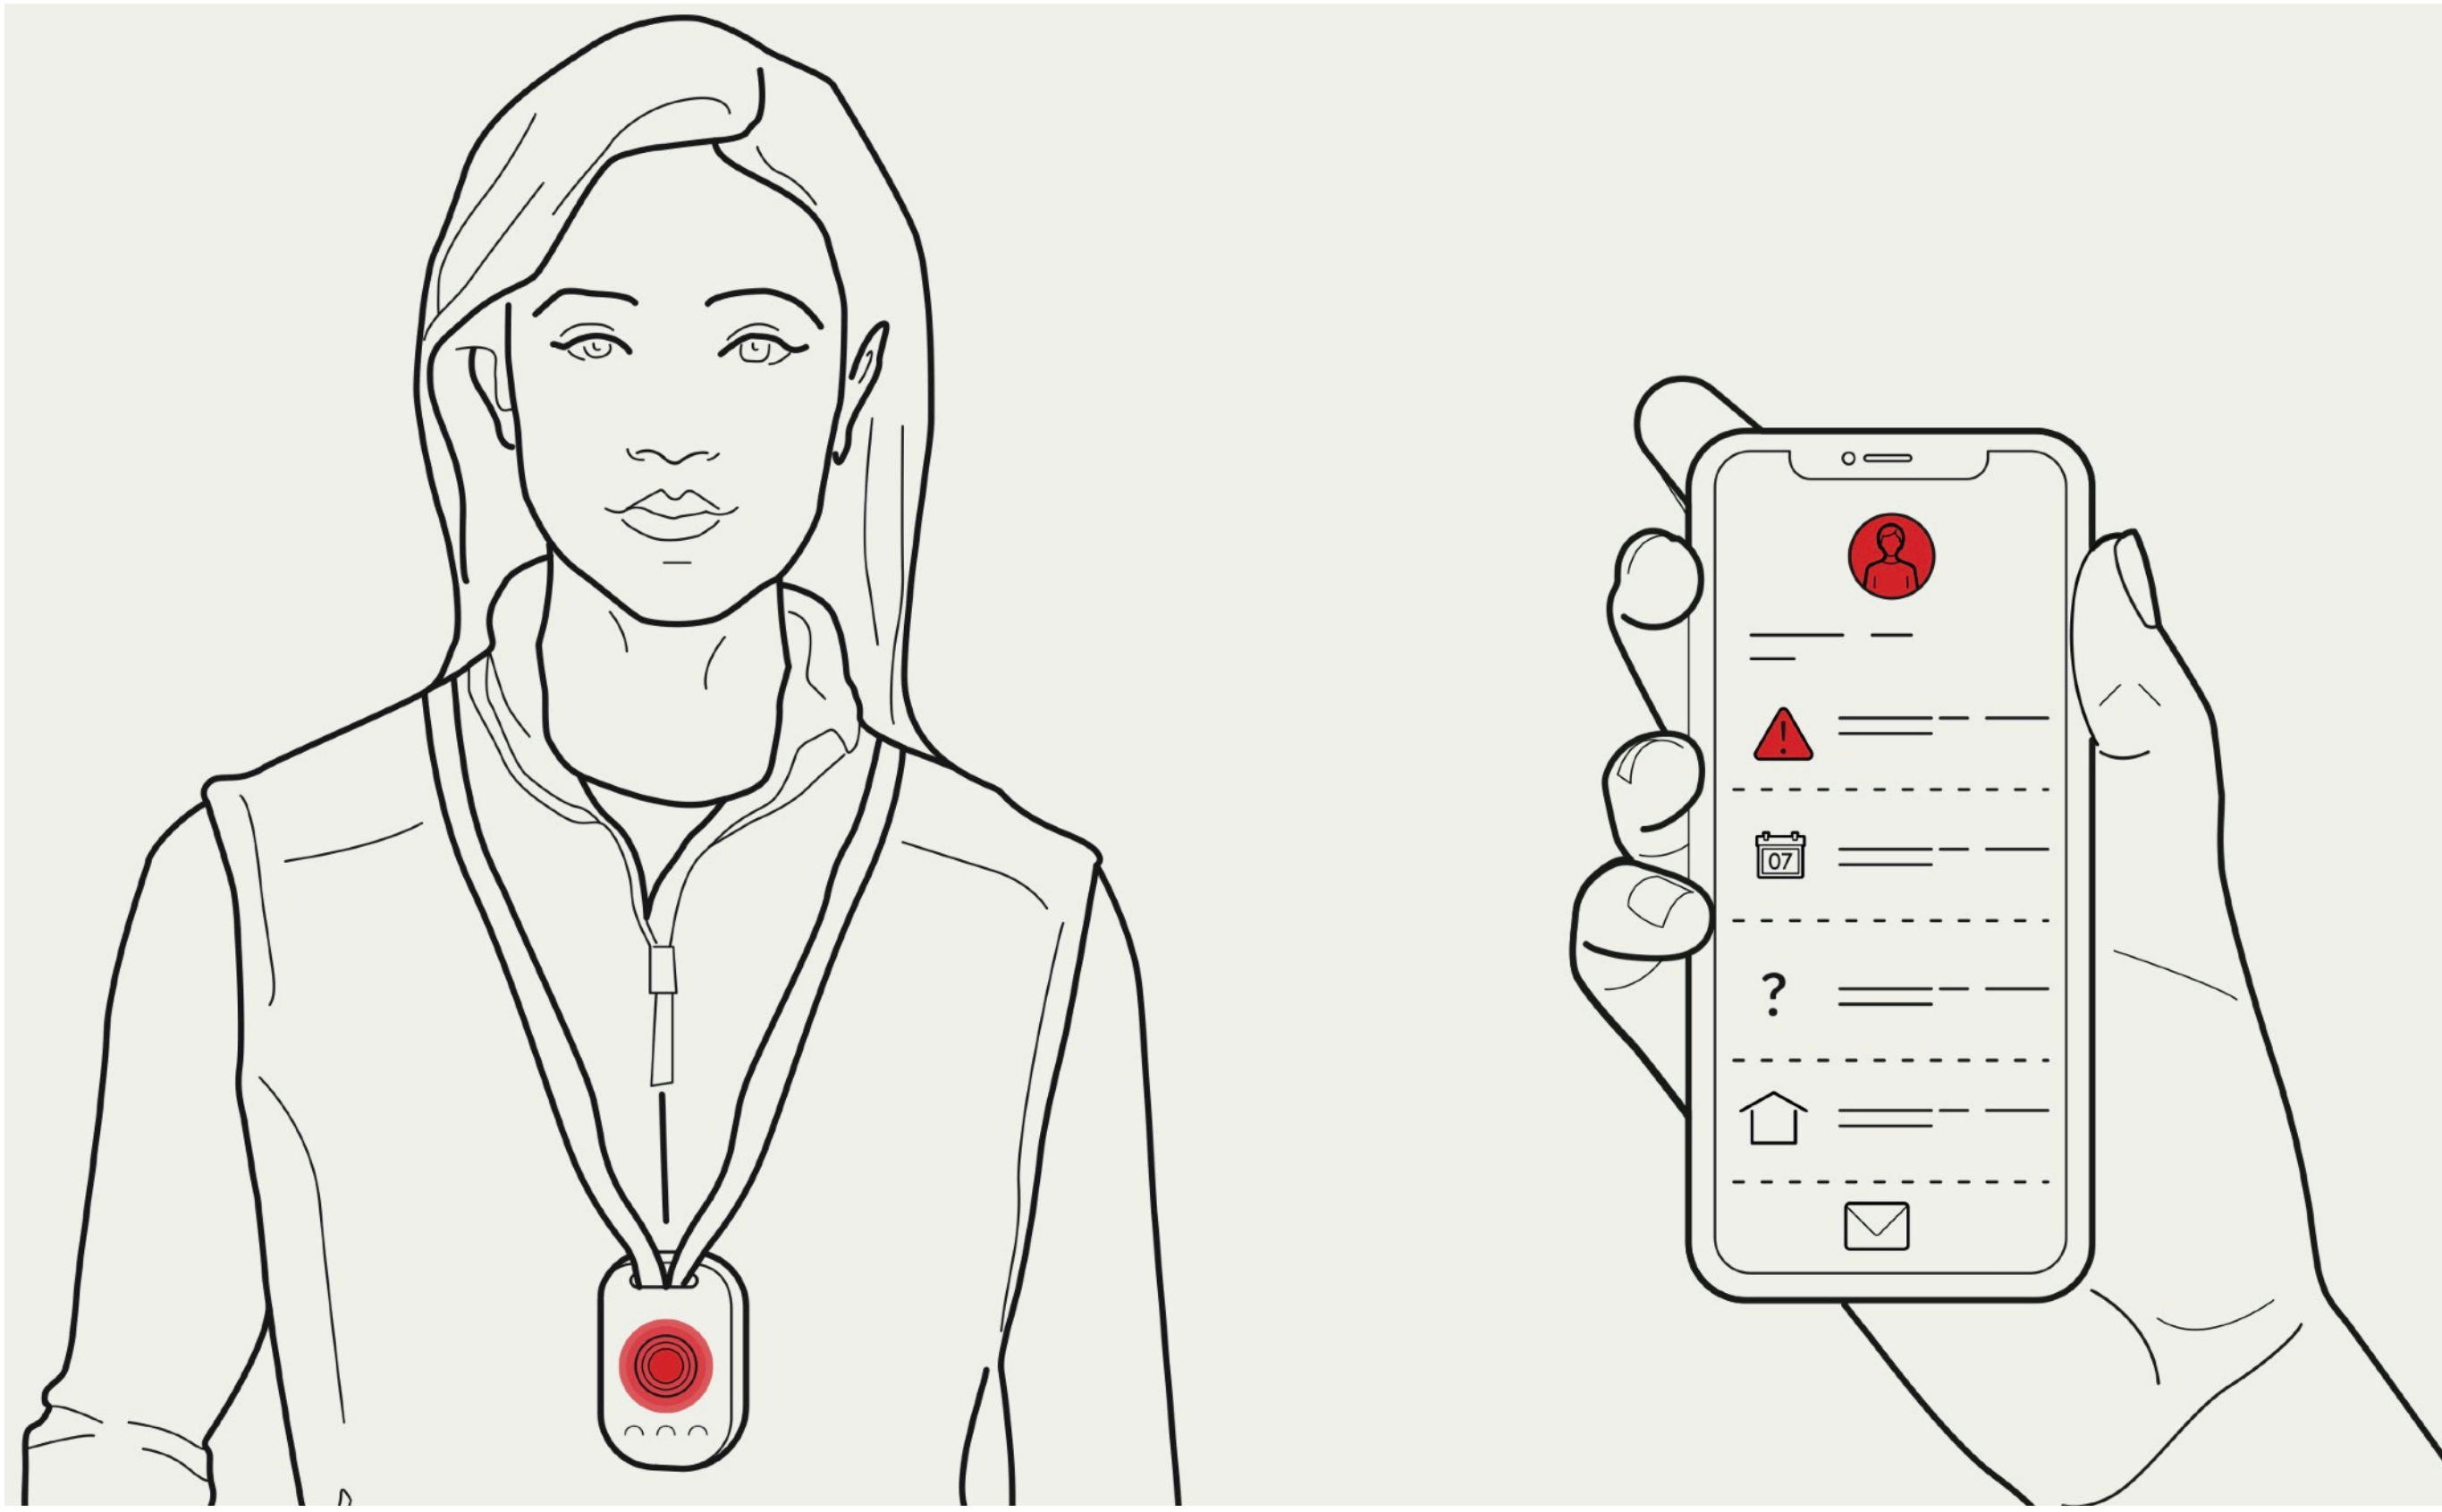

# Health status can be reported by push of a button

**Other employees with possible exposure can be notified**

# Ensures company keeps unaffected staff safe

# Contact tracing dashboard

# How does it work?

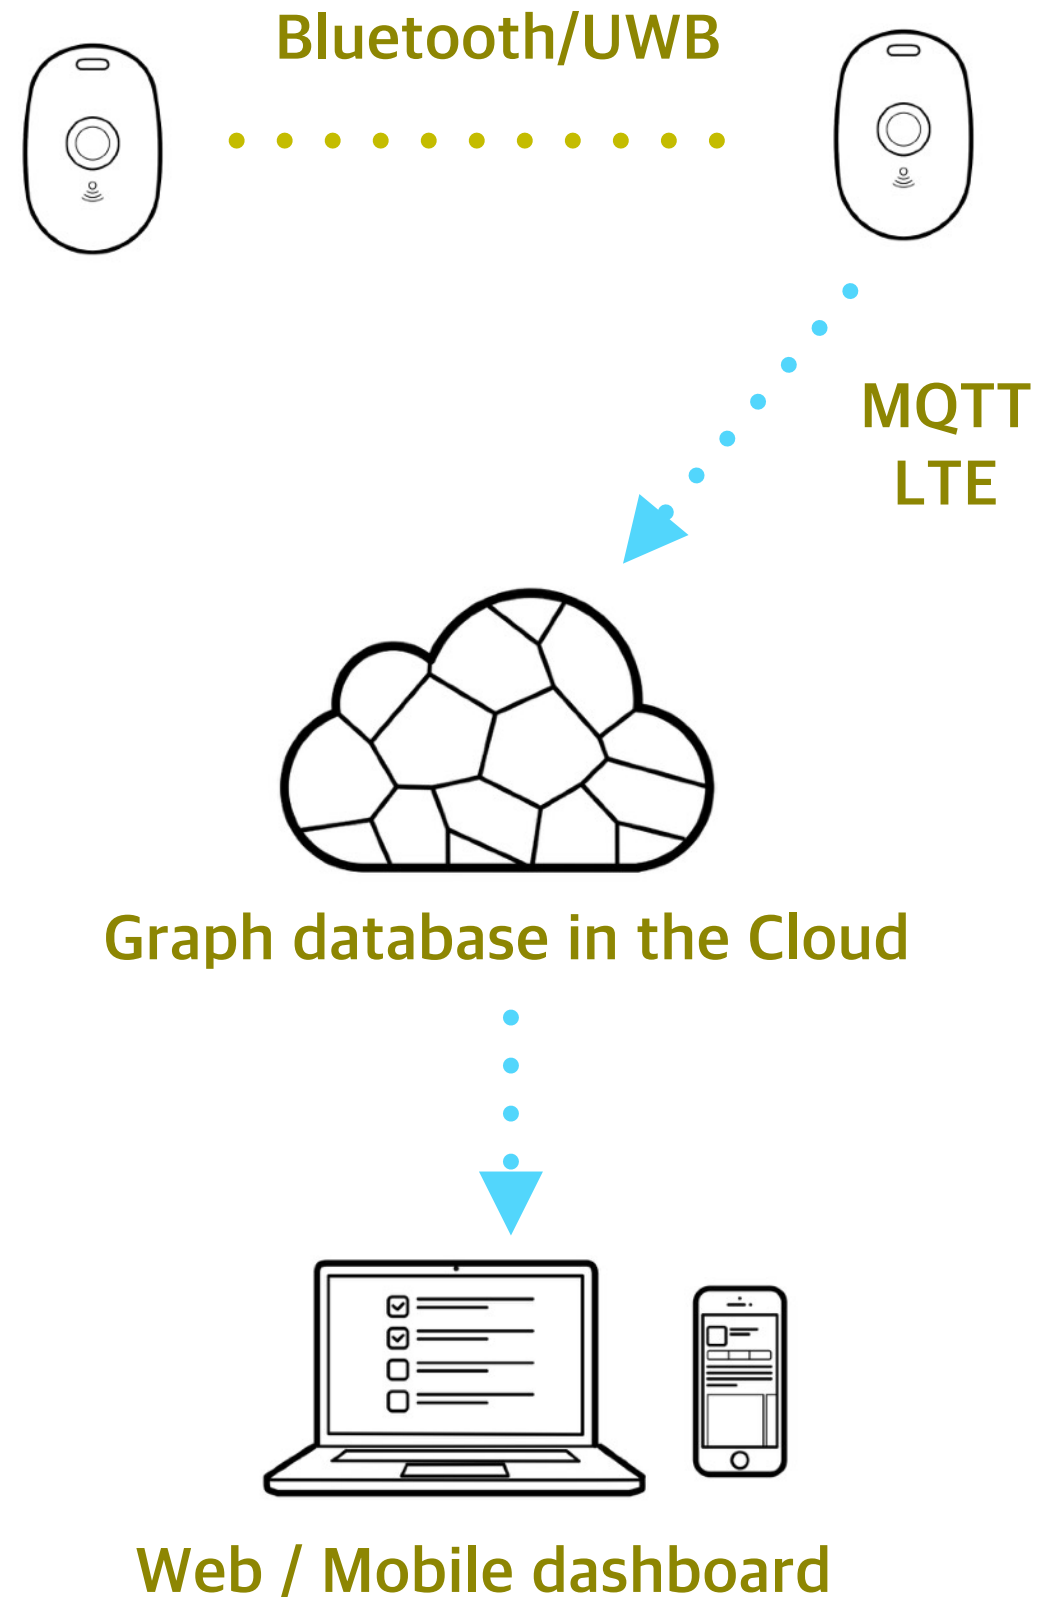

Waterproof enclosure

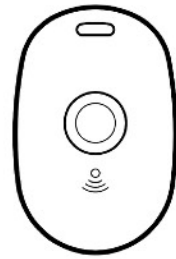

Proximity and cellular module

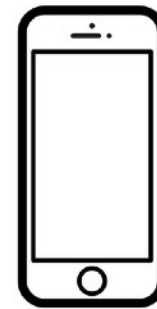

Rechargeable battery

# Why wearable is better than mobile app?

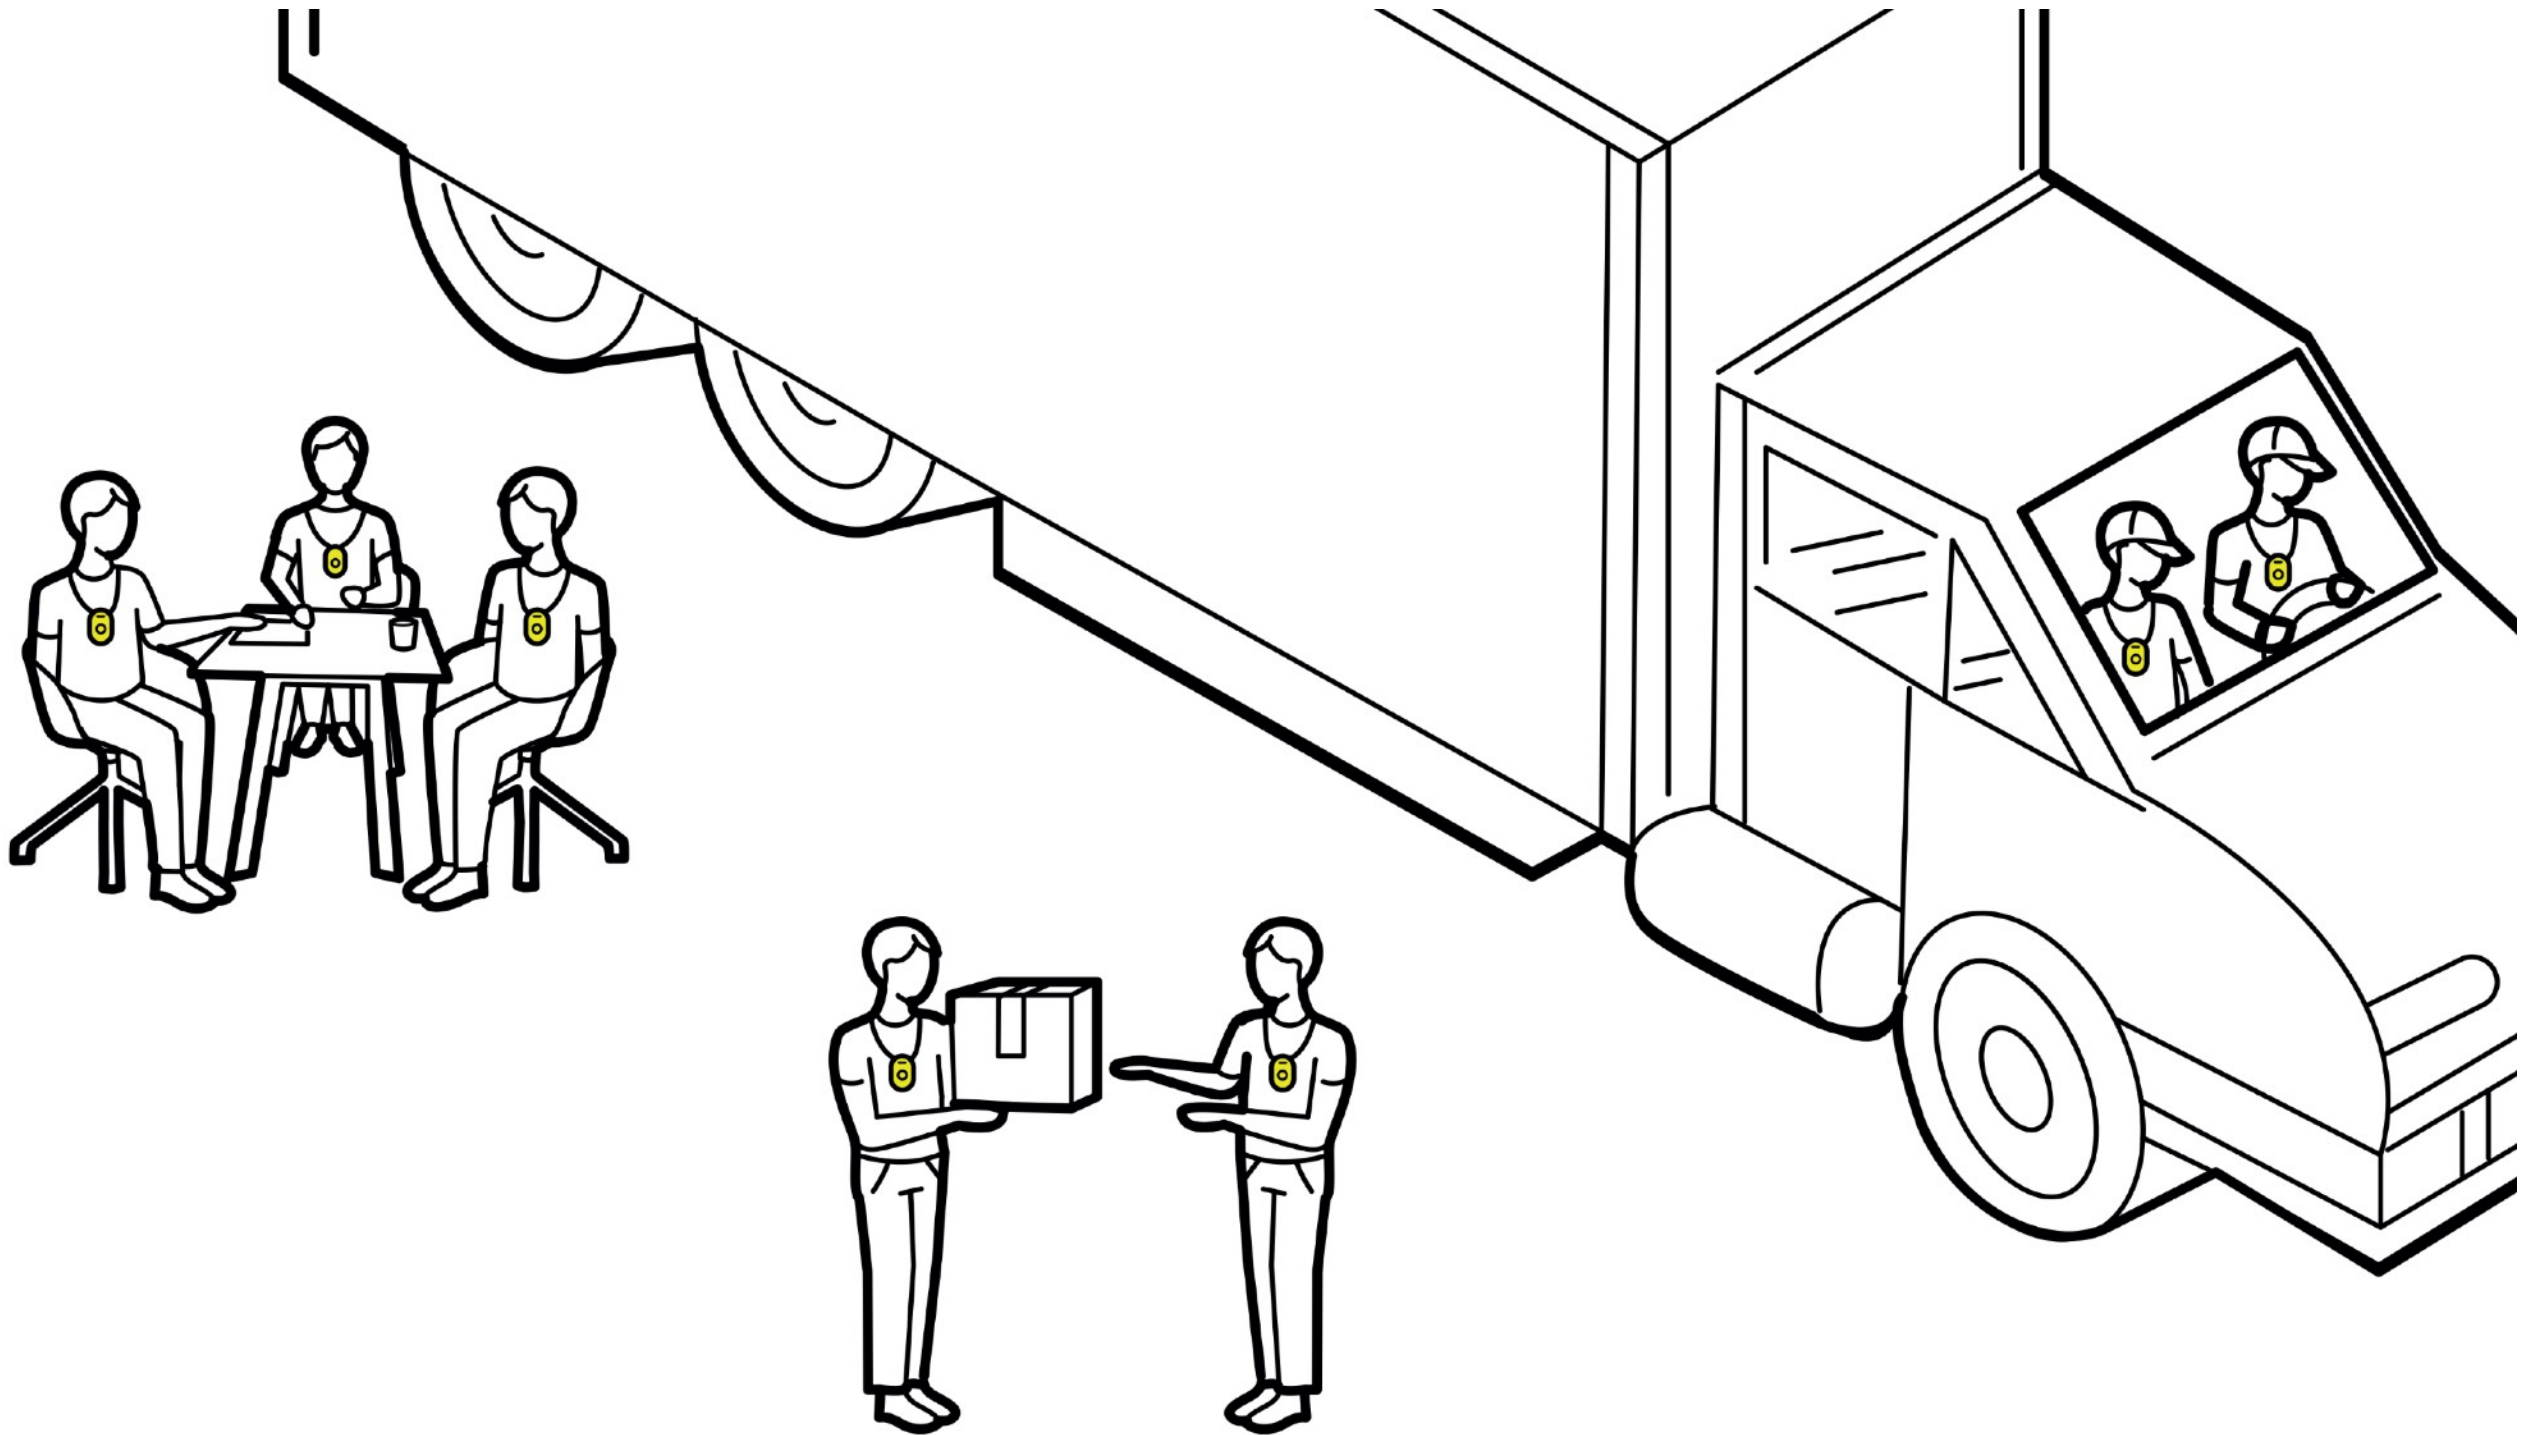

- ✓ Saves precise proximity and location automatically
- ✓ Works hands-free in the background
- ✓ Simple and cheap to manufacture
- ✓ Easy to distribute and use by non-tech staff

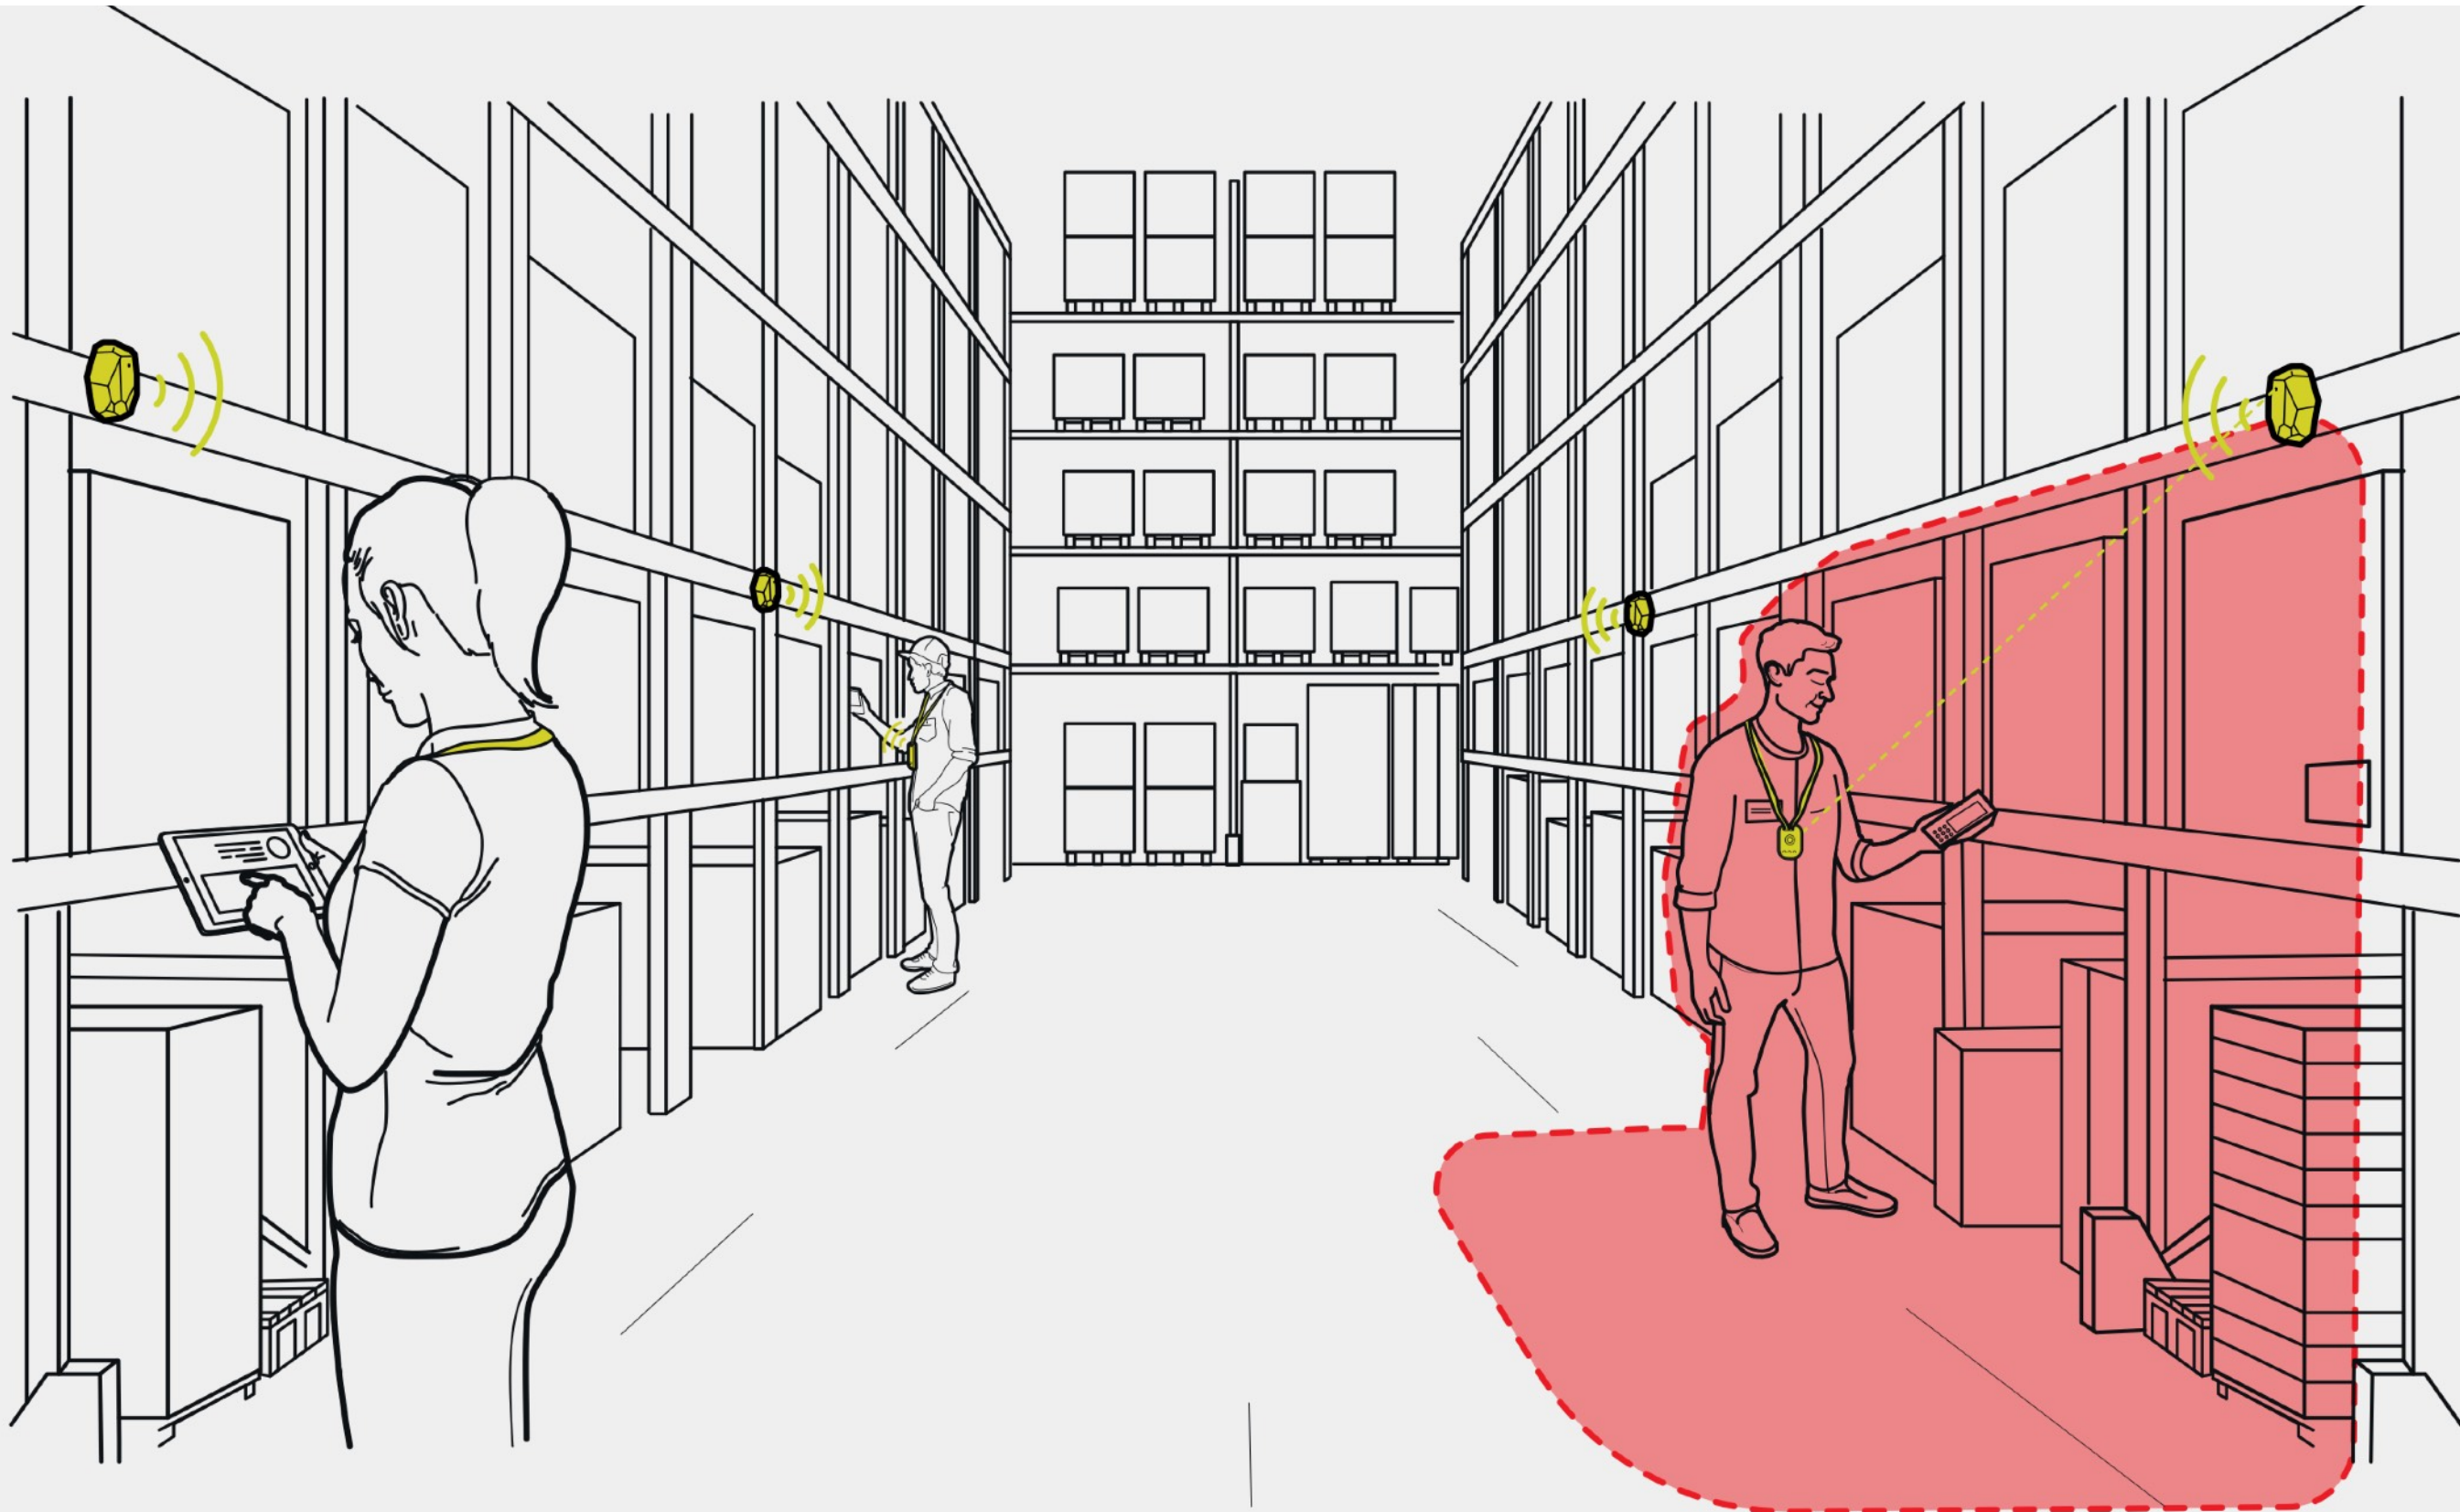

- ✗ Requires manual user action and touching the phone
- ✗ Privacy restrictions & cannot work in the background
- ✗ Expensive to develop and maintain for defragmented mobile market
- ✗ Workers might struggle to download and configure an app

# Helps to protect all kinds of workplaces

# Wearable can also records visited locations

# Allowing greater safety and data-driven disinfection

# About us

Estimote is a Polish-American technology company headquartered in **Kraków, Poland** / EU with remote teams in New York and San Francisco. Our company manufactures its products solely in Central Europe.

Estimote was founded in 2012 and has raised \$20M from US and EU investors. We are a market leader in proximity and location IoT products.

Estimote has manufactured and distributed globally millions of devices to help the most progressive companies with employee safety and productivity initiatives.
