

COVID-19

Fitting of protective vehicle screens

How to Guide: Protective Vehicle Screens

Skanska UK Standards

As part of the Skanska UK COVID-19 Travel Standard the fitting of protective screens is an acceptable method by which to increase the number of people permitted to travel within a vehicle to above one. For example within a Minibus.

Where protective screening is to be fitted within a vehicle this must be carried out by professional suppliers.

Perspex materials or those used in the construction of soft top vehicles are appropriate for the construction of screens. These can be secured using Velcro or permanently fitted using screws and mastic sealants.

Skanskas COVID-19 Guidelines and Operating Procedures are contained on the OneSkanska COVID-19 Information page found here:

Roles & Responsibilities

Operations Director:

Ensure that suitable arrangements and resources are in place to satisfy the Skanska UK standard and control measures.

Project Directors/General Managers:

Ensure that all personnel for whom they are responsible are aware of requirements within this guidance.

Site Managers/Construction Supervisors:

Communicate relevant information within this guidance to those undertaking work.

Make sure, within their areas of responsibility, that there is a risk assessment in place for all activities (accompanied by a safe system of work where required).

Operatives:

Take reasonable care of themselves, their colleagues, contractors and others, comply with health and safety instructions and procedures provided for the purposes of ensuring their health, safety and welfare.

Not interfere with, or intentionally misuse anything provided in the interests of health and safety, including items of personal protective equipment.

Key Hazards:

Human to Human Transmission of coronavirus

Mandatory Competencies:

No specific mandatory competencies; follow manufacturers guidance and the COVID-19 guidelines

COVID-19

Fitting of protective vehicle screens

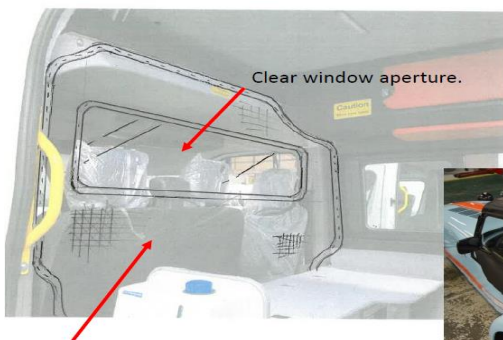

How to Guide: Protective Vehicle Screens

Suggested Control Measures:

- Wash your hands thoroughly prior to getting into the vehicle
- Seating positions should be arranged to effect maximum social distance
- Where possible keep to your own seat
- Don't use the air conditioning. Keep windows open in the vehicle to let in fresh air
- Regularly clean touchpoints, steering wheels, gear sticks, doors, buttons etc using antibacterial wipes or bleach
- Regularly wash your hands with sanitizer or using soap & water on exiting the vehicle
- Examples of the sequence for fitting protective screening is outlined in the images below:

Protective Screen Deployed

Black fabric surround

Fitted using double sided Velcro, (no specialist tools required)

Screen constructed from same material used on soft top sportscars.

Cleaning of Screen

Screen can easily be removed without the use of any tools and disinfected and jet washed off vehicle.
