Scheme name:	<div>M56 Junction 6-8 SM</div>		
Project stage:	<div>6</div>	Date Case Study submitted	<div>10/11/2022</div>

Health and Safety

Scheme context:

We will build an all-lane running motorway on the M56 between junctions 6 and 8. This will provide increased capacity in a cost-effective way, maximising the use of the existing road.

Case study details:

We were experiencing issues with people working on site understanding the correct PPE that was required to be worn.

We developed a visual solution using a life size image of a person wearing the correct PPE. On each item of PPE a QR code was created enabling people to obtain further detail on what the PPE requirements are e.g. <https://www.highwayssafetyhub.com/gt-ppe.html>

Feedback from the site team has been very positive saying that the new signs are very clear and explain the requirements well in a visual way.

What are the benefits?

Better understanding of PPE requirements and where to obtain the correct gear. This has resulted in improved compliance with site wearing of PPE.

How can others apply your learning?

The idea has been rolled out to all the GT highways schemes.

Visual materials that explain your approach / outcome

See image opposite.
