

PEOPLE & PLANT INTERFACE

SAFE SITE

A Safe Site is designed with a layout that effectively controls and manages all work activities involving people and plant. Activities on a Safe Site are planned using a Safe Systems of Work (SSOW).

ALL SITES should:

- **Give people relevant information** (site rules/induction)
- **Have access control** (monitor compliance)
- **Segregate people & plant**
- **Have suitable pedestrian and traffic routes** clearly defined, marked and maintained
- **Ensure suitable lighting levels**
- **Control vehicle speeds**
- **Use correct, visible signage**
- **Minimise & manage all vehicle movements**, particularly reversing
- **Develop Safe Systems of Work** (SSoW) for every activity
- **Supervise & monitor** controls effectively

Further details for operators and workers can be found in our TBT.

Thinking differently, making better decisions and changing lives.
