

NRTS Work Instruction - Yaktrax Pro for Use on Ice and Snow

Yaktrax Pro is a traction device intended for use in the ice and snow to reduce the risk of trips, slips and falls. These are available to order on Bybox for operatives who are working outdoors during the winter months.

Yaktrax Pro feature a spikeless, ultra-lightweight design which maximises traction, safety and confidence on snow and ice. The velcro strap ensures that they remain secure and solid across your footwear whilst a heel tab makes them easy to get on and off.

Yaktrax Pro ice grips are designed only for use on packed snow and ice. It is dangerous to wear Yaktrax indoors. DO NOT USE in offices, Transmission Stations or shops. DO NOT USE while driving or cycling.

Footwear sizing is based on the inside fit of the shoe or boot to our feet. As Yaktrax fit on the outside of the footwear, it is the actual footprint or circumference that is relevant when you choose the correct size.

	Extra Small	Small	Medium	Large	Extra Large
EU Shoe Size	34-37	38-40	41-43	44-46	46+
ø in cm	48-58 cm	58-64 cm	64-72 cm	72-76 cm	76-82 cm
ø in inches	19-23 inches	23-25 inches	25-28 inches	28-30 inches	30-32 inches

Yaktrax® are designed to be worn on packed snow and ice. Products with coils need a depth of ice to bite into that is equivalent to half the depth of the coil. Yaktrax® devices are not intended for use on gravel, concrete, or sanded roads cleared of snow, as these do not allow the coils to compress properly, resulting in damage.

- DO NOT wear indoors
- DO NOT wear while driving or cycling
- DO NOT use on frost or patches of black ice
- DO NOT use on slushy thawing snow
- DO NOT use on slippery mud
